

NECIP SULBU

Senior Business Analyst

I turn complex business processes into clear requirements, reliable integrations and working products. My enterprise work spans insurance, banking, tourism, telecoms and energy. I also build and operate software, combining business analysis with hands-on, AI-assisted development.

• Work History

Independent product development

My own products | 2026-present

Build and operate software including F1 Intelligence and Meditation Student Portal: requirements, architecture, development, integrations, testing and production operations. Ten independent projects are detailed on page 2.

Senior Business Analyst

Adesso Turkey · AgeSA | Aug 2024-Jul 2025

Analysed the individual pension (BES) application journey in AgeSA Mobil in a 25+ person team. Wrote functional specifications and clarified business rules with developers. Personally prepared and executed functional tests in Xray. Agile delivery with Jira and Confluence; .NET application stack.

Business Analyst

ODEON Software & Technology | Dec 2021-Sep 2023

Analysed tourism software requirements, wrote user stories and led refinement discussions in a multinational delivery team. Created Axure prototypes and tested web services with Postman and SOAP UI. Documented requirements in Jira and Confluence.

SAP Business Analyst

Magis Technology · MPT Myanmar | Jun 2019-Jun 2021

Analysed SAP SD and FI-CO changes at MPT Myanmar: Credit Risk Management, PR/PO Management and Pricing Procedures. Defined functional requirements and process models with stakeholders and developers. Supported resource planning, SIT/UAT and incident/root-cause analysis.

Business Analyst

IBTech · QNB Finansbank | Jul 2018-Jun 2019

Analysed card statements, minimum payments, due dates and credit-card debt repayment in an eight-person IBTech/QNB team supported by Banksoft. Prepared functional designs and mapped payment data supplied to Q Digital Assistant; supported source-system integration testing and SIT/UAT.

Business Analyst / Consultant

Enerjisa | Sep 2016-Jun 2018

Analysed SAP IS-U / IDEX transfers during unbundling. Investigated FI-CA, Billing, DM and WM errors and routed defects; team of eight within a 50+ person technical group. Identified an overnight FI-CA synchronisation failure and called in the team before morning sales and payment channels opened.

Product development, delivery and experiments. Each title links to the matching portfolio page, with screenshots, implementation details and available source code or live links.

F1 Intelligence

I build and operate live race-weekend coverage, timing, tyre and battle views. Recorded snapshots keep replay aligned to the same point in a session. The published 30-day Cloudflare view shows 9.61k visits and 468.3k HTTP requests. Next.js, FastAPI, PostgreSQL and Redis.

[f1intelligence.uk](#) | [Replay](#) | [Portfolio](#)

Meditation student portal

Registration, payments, practice plans, reminders and Calendar/Meet scheduling for my meditation service. Daily follow-up fell from roughly 2-3 hours to about 10 minutes (my estimates). Seven students: 1,502 messages, 296 check-ins and 4,215 minutes across 242 completed practices, excluding test/demo profiles. Next.js, NestJS and PostgreSQL.

[sakinzihin.com](#) | [GitHub](#) | [Portfolio](#)

Aysu İtir Karaçam / Yoga platform

A public yoga website and student/admin application with class schedules, enrolments, attendance fields and group management. Zoom meeting creation stores teacher and student links separately; Shopier payments and refunds update course access. Next.js and Prisma.

[Live site](#) | [GitHub](#) | [Portfolio](#)

AgentDock

A Python tool for coordinating coding agents through reviewable plans and separate Git worktrees. I built mission state, dependency review, progress inspection, terminal access, messaging and pause controls, using the existing Codex CLI login.

[GitHub](#) | [Portfolio](#)

WhatsApp & messaging agents

A configurable FastAPI backend for WhatsApp, Telegram and Instagram agents. Includes an inbox, human handoff, knowledge retrieval, model fallback and usage tracking. Previously deployed and used; no longer running.

[GitHub](#) | [Portfolio](#)

FlyWire Neuro

A local fruit-fly simulation using a 138,639-neuron LIF model based on FlyWire connectivity. A 3D body, brain activity map, stimulus controls, time series and recorded runs support exploration. Six GitHub stars in the published snapshot; an experimental model with approximations.

[GitHub](#) | [Portfolio](#)

Earth Intelligence

A FastAPI backend combining USGS earthquakes and NASA EONET events as JSON/GeoJSON, with provider status and SQLite snapshots. Source failures remain isolated; replay only covers records collected by the instance. Backend experiment.

[GitHub](#) | [Portfolio](#)

Melis Bozkurt / Website

A lightweight multilingual legal website with biography, practice areas, press and contact information. I built language switching and a responsive editorial layout with content that is straightforward to maintain.

[Live site](#) | [GitHub](#) | [Portfolio](#)

Travel Blog

A Next.js and Prisma publishing project with destination cards, bilingual stories, image uploads, map and timeline views. Shared place records feed each view; an admin editor manages the content. In development.

[GitHub](#) | [Portfolio](#)

Road Trip with Alex

A single-file travel guide through Türkiye with a Leaflet map, phased itinerary and Google Maps route links. Destination notes and markers share one data source. Published with GitHub Pages.
